Machine Learning: An Algorithmic Perspective

Machine Learning: An Algorithmic Perspective STEPHEN MARSLAND REVIEWED BY JP LEWIS When several good books on a subject are available the pedagogical style of a book becomes more than a secondary consideration This is particularly true in the case of mathematical and algorithmic subjects such as machine learning, where

A Statistical Perspective on Algorithmic Leveraging

A Statistical Perspective on Algorithmic Leveraging statistical analysis of the algorithmic leveraging paradigm We do so in the context of parameter estimation in fit-ting linear regression models for large-scale data—where, by “large-scale,” we mean that the data define a high-dimensional problem in terms of sample size n , as opposed

Machine learning:Trends, perspectives, and prospects

A diverse array of machine-learning algorithms has been developed to cover the wide variety of data and problem types exhibited across different machine-learning problems (1, 2) Conceptually, machine-learning algorithms can be viewed as searching through a large space of candidate programs, guided by training experience, to find

Algorithmic Bias: A Counterfactual Perspective

Algorithmic Bias: A Counterfactual Perspective* Bo Cowgill Columbia University Catherine Tucker Massachusetts Institute of Technology ABSTRACT We discuss an alternative approach to measuring bias and fairness in machine learning: Counterfactual evaluation In many practical settings, the alternative to a biased algorithm is not an unbiased

Machine Learning: Multi Layer Perceptrons

Neural networks single neurons are not able to solve complex tasks (eg restricted to linear calculations) creating networks by hand is too expensive; we want to learn from data nonlinear features also have to be generated by hand; tessalations become intractable for larger dimensions Machine Learning: Multi Layer Perceptrons - p3/61
